¹¹ Cosmo-numba facilitate the computation of E-/B-modes decomposition using two methods. One
¹² of them is the Complete Orthogonal Sets of E-/B-mode Integrals (COSEBIs) as presented in
¹³ P. Schneider et al. (2010). The COSEBIs rely on very high precision computation requiring
¹⁴ more than 80 decimal numbers. P. Schneider et al. (2010) propose an implementation
¹⁵ using mathematica. cosmo-numba make use of combination of sympy and mpmath to reach the
¹⁶ required precision. This python version enable an easier integration in cosmology pipeline and
¹⁷ facilitate the null tests.

¹⁸ This software package also include the computation of the pure-mode correlation functions
¹⁹ presented in Peter Schneider et al. (2022). Those integrals have less constraints than the
²⁰ COSEBIs but having a fast computation is necessary to computing the covariance matrix. One
²¹ can also include use those correlation function for cosmological inference in which case the
²² multiple call to the likelihood will also require a fast implementation.

²³ COSEBIs

²⁴ The COSEBIs are defined as:

$$E = \frac{1}{2} \int_0^\infty d\theta [T_+(\theta) \xi_+(\theta) + T_-(\theta) \xi_-(\theta)] \quad (1)$$

²⁵ Mathematics

²⁶ Single dollars (\$) are required for inline mathematics e.g. $f(x) = e^{\pi/x}$

²⁷ Double dollars make self-standing equations:

$$\Theta(x) = \begin{cases} 0 & \text{if } x < 0 \\ 1 & \text{else} \end{cases}$$

²⁷ You can also use plain L^AT_EX for equations

$$\hat{f}(\omega) = \int_{-\infty}^{\infty} f(x)e^{i\omega x}dx \quad (2)$$

²⁸ and refer to [Equation 2](#) from text.

²⁹ Citations

³⁰ Citations to entries in paper.bib should be in [rMarkdown](#) format.

³¹ If you want to cite a software repository URL (e.g. something on GitHub without a preferred
³² citation) then you can do it with the example BibTeX entry below for (?).

³³ For a quick reference, the following citation commands can be used: - @author:2001 ->
³⁴ “Author et al. (2001)” - [@author:2001] -> “(Author et al., 2001)” - [@author1:2001;
³⁵ @author2:2001] -> “(Author1 et al., 2001; Author2 et al., 2002)”

³⁶ Figures

³⁷ Figures can be included like this: Caption for example figure. and referenced from text using
³⁸ [section](#).

³⁹ Figure sizes can be customized by adding an optional second parameter: Caption for example
⁴⁰ figure.

⁴¹ Acknowledgements

⁴² We acknowledge contributions from Brigitta Sipocz, Syrtis Major, and Semyeong Oh, and
⁴³ support from Kathryn Johnston during the genesis of this project.
